Continuation of 11. does NOT place the application in condition for allowance because: Regarding claims 1,7, and 13, The applicant argues that a D-type flip-flop shown in Hogge's invention is not the equivalent to a latch. The physical circuitry of a latch can be shown to be different from the physical circuitry of a D-type flip flop. Based on the applicant's recited limitations, the physical circuitry of the latch is not recited. The claims recite the functionality of the latch as "providing a second signal by passing the first signal when the clock signal is at the first level, and storing the first signal when the clock signal is at the second level, wherein the second signal is provided by a latch", As explained the final rejection mailed June 28, 2005, although Hogge does not explicitly state that the second signal is produced by a latch, based on Spangolettie et al's invention, it can be shown that the second signal, outputted by a D-type flip flop as explicitly specified by Hogge, acts as a latch as defined in the limitations recited in the claims. Please refer to the final rejection as disclosed in the office action mailed June 28, 2005 for further explaination as to why, based on the limitation recited defining the functionality of the latch recited, disclosed by Hogge can be shown to act as a latch as described by Spangoletti et al.

In addition to the explaination disclosed in the previous Office Action, mailed June 28, 2005, Spangoletti explicitly states, in Fig. 4, label 203 and Col. 12, lines 1-5, a "latch receives, on input D203, the signal from output Q202 of D-type (202) ... ". Although Hogge explicitly states a D-type flip flop, the D-type flip flop shown in Fig. 4, labels 116, is identical to the logic gate shown in Fig. 4, label 203 of Spangoletti's invention. Since Spangoletti states that the shown logic gate is a latch, it is shown that Hogge's disclosed logic gate also acts as a latch. Futhermore, Spangoletti's invention is used to show that Hogge's disclosed D-type flip flop is identical to the latch shown in Spangoletti's invention, thus motivation is unnecessary.

Continuation of 13. Other: The applicant mailed a response to the final rejection sent 6/28/2005 within 2 months. The date, 8/28/2005, the 2 month deadline for the response to the final rejection, lands on a Sunday and the response to the final rejection was mailed 8/29/2005 is appropriate to the 2 month deadline.
